Data Professional Salary Map

Jason Tompkins

1/18/2021

The geographical data was taken from the results of three surveys completed in 2017, 2018, and 2019. The original source of the data was brentozar.com . Brent Ozar is a Database Administrator and online content creator. The data set contains 6893 observations of 29 variable.

The analysis below seeks to provide insight on the US locations and salaries of the Data Professionals surveyed.

The map below shows how the respondants of the survey are distributed across the United States. The clusters are consistant with areas with populated cities. The size of the points are proportional to the relative size of the salary it represents. Some of the larger points are noticeable, but they are spread across various states.
